XhoI: This cDNA library was constructed from mRNA isolated
from cotyledons of 3- and 7-day-old Williams seedlings
which were propagated on paper towels with distilled
water. The cotyledons were flash-frozen in liquid
nitrogen, then lyophilized for 72 hours. Unequal amounts
of mRNA was used for cDNA synthesis. Stratagene's cDNA
Synthesize the cDNA. First- stranded synthesis was
performed with 5-methyl dCTP, hence the ligated cDNA was
hemimethylated. A modification of Stratagene's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Shoemaker, R., Keim, P., Vodkin, L., Erpelding, J., Coryell, V., Khanna, A., Bolla, B., Marra, M., Hillier, L., Kucaba, T., Martin, J., Beck, C., Wylie, T., Underwood, K., Steptoe, M., Theising, B., Allen, M., Bowers, Person, B., Swaller, T., Gibbons, M., Pape, D., Harvey, N., Schurk, R., Ritter, E., Kohn, S., Shin, T., Jackson, Y., Cardenas, M., McCann Public Soybean, EST Project

the primer at the 5' end of the poly(A) tract. After second strand synthesis, the poly(A) tract. After second strand synthesis, the poly(A) tract. After with cloned Pfu DNA, ligated to EcoRI adapters and subsequently phosphorylated. The XhoI site within the first-strand synthesis primer was then restricted by digestion with XhoI; all XhoI sites in the cDNA would be protected by their hemimethylated status. The cDNA constructs were size-fractionated with a 500 bp cutcoff, using GibcoBRL Life Technologies' cDNA Size Fractionation Stratagene's pBluescript(tm) I XR Predigested vector (pBluescript II SK(+) that has been digested with EcoRI and XhoI, and phosphorylated by Stratagene's 97% of the white and blue colonies appear to contain recombinant plasmids with cDNA inserts, based on size (n=30). This corpus years. primer [GAGAGAGAGAGAGAGAACTAGTCTCGAG(T)18] to anchor the primer at the 5' end of the boly(A) tract after 1444 ggacagggcctcaatgagctcttaagctcccgaaaaagtgtattgaatggaattgtaaat 1503 1504 ggaattgacattaatgattggaaccccaccacaga-------caagtgtctc 1548 1729 gigcaaitigicaigciiggaicigggaiccaaitiiigaaggciggaigagiciacc 1788 1849 agaataactgcaggttgcgatatattgttaatgccatcgagatttgaaccttgcggtctt 1908 120 181 ACTAACTACACCCTTGAGACCCTGCAAAGTGGCAAGCGTCAGTGCAAAGCCGCCTTGCAA 240 361 GIGCAGCTAGICATGTTGGGAACTGGAAGGCCGGACTTAGAAGATATGCTTANGCAGTTT 420 300 Gaps 9 61 GGTTGGGGTTTGCATGGATCATGAGAATGAGAATTGGAAATTGAGAAGAATTGTGTGAAT 1549 cctcatcattattctgtcgatgacctctctggaaaggccaaatgtaaagctgaattgcag 301 GATCAACAGAAAGGCATTGATCTCATAGCCGAAGCAATTCCTTGGATAGTGGGCCAGGAT gagtcgagttacaaggataaattccgtggatgggttggatttagtgttccagtttcccac 481 CNGATAACAGCANGTGCAAACATATTGCTGATGCCATCAAGATTTGAGCCATGTGGATTG 15; Length 618; Score 225.2; DB 10; Length Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /lab.host="DH10B"
//lab.host="Vector: pBluescript II SK+; Site_1: ECORI; Site_2:
Xhoi; This cDNA library was constructed from mRNA isolated
from cotyledons of 3- and 7-day-old williams seedlings
which were propagated on paper towels with distilled
water. The cotyledons were flash-frozen in liquid
nitrogen, then lyophilized for. 72 hours. Unequal amounts
of mRNA was used for cDNA synthesis. Stratagene's cDNA
synthesize the cDNA. First- stranded synthesis was
performed with 5-methyl dCTP, hence the ligated cDNA was
hemimethylated. A modification of Stratagene's cDNA
synthesize the cDNA. First- stranded synthesis was
performed with 5-methyl dCTP, hence the ligated cDNA was
hemimethylated. A modification of Stratagene's
furst-strand synthesis primer was used. An anchor
nuclectide (V-A-A, C, or G) was added to the 3' end of the
primer [GAAGAGAGAGAGAGAAAACTAGATCATCAGG(T)18] to anchor
the primer at the 5' end of the poly(A) tract. After
second strand synthesis, the cDNA would be
primer structs were size-fractionated with a sob by
digestion with Xho!; all Xho! sites in the cDNA would be
protected by their hemimethylated status. The cDNA
constructs were size-fractionated with a sob ob cutoff,
using Gibcobr. Life Technologies' cDNA Size Fractionation
clumn. The column eluent was then ligated into
stratagene's pBluescript(tm) II XR Predigested vector
(pBluescript II SK(+) that has been digested with EcoRI
and Xho!, and phosphorylated by Stratagene). 97% of the
white and blue colonies appear to contain recombinant
